

Federal Communications Commission
To Whom It May Concern:

In the comment that I submitted earlier today, I neglected to point out that I live in an apartment. My amateur radio antennas are on my balcony, which places my antennas within a few feet of the electrical wiring. Any frequencies that are not notched out will be totally unusable to me, as BPL will be radiating from my electrical wiring with a very strong signal to my antenna. Because I don't have a rotatable beam antenna on a tower away from my residence and away from power lines, I am totally unable to mitigate interference to my amateur station.

Respectfully Submitted,

Mark M. Oring
